### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

Tanaka et al (US 3,959,049) teaches a process for making an artificial leather, the process comprises depositing a liquid mixture of an isocyanate terminated polyurethane prepolymer (formed by reacting polyols and polyisocyanates together), a foam stabilizer, and a catalyst onto a release paper; and joining the prepolymer coated release paper to a water vapor-permeable substrate; and then curing the layers together (abstract; figure); it is conventional in the art to provide a low pressure polyurethane spraying assembly, where an isocyanate component and a polyol component are separately stored in different containers, and then the components are mixed in a blending chamber before the mixture is extruded out for used as a sprayed coating composition in order to prevent premature curing of the coating composition as exemplified in the teachings of Kropfield (US 5,810,254); it is also known per se in the art to convey a release layer coated with a porous, but non-foamable polyurethane composition and a fibrous substrate onto a spaced apart parallel rolls, so that the coating material is compressed between the rollers as exemplified in the teachings of Okazaki et al (col. 5 line 48 to col. 6 line 67; col. 8 lines 26-59; col. 9 lines 9-55; col. 13 lines 10-55; figure 2); however, none of the references taken teaches (in the context of the recited claim taken as a whole) *"positioning the liquid mixed materials vertically discharged from injecting and mixing device between the two cloths*

*before the two cloths converge and enter the two parallel rollers ..."* (emphasis added).

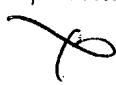

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

2. The specification amendment dated 01-14-04 was entered.
